PROFFESIONAL SUMMARY

I am a self-driven and motivated full stack (MERN) stack developer with expertise in Typescript, Nestjs, Nextjs, React native and a strong passion for technology and innovation. Proficient in full-stack web development (HTML, CSS, Typescript, JavaScript, Node.js, Nestjs, React Native Next.js, React.js, and MongoDB as the database) with proven leadership experience and a track record of responsibility, both academically and professionally. I am seeking opportunities to grow and contribute in dynamic tech environments through solving real world problems

TECHNICAL SKILLS

Languages: Typescript, JavaScript, python, SQL

Front-end development: HTML, CSS, Tailwind CSS, Next.js, React

Framework: Next.js, React

Database: MongoDB, MySQL, PostgreSQL

Back-end: Nestjs, Express, NodeJS, Typescript, JavaScript

Tools: Figma, Git, GitHub, Postman, Vite, Linux, Cypress, Supertest

EXPERIENCE

Back-end Developer | AquilaCyber (REMOTE) **Oct 2025 - Present**

- **Backend Architecture**: Built scalable backend services from scratch using **Express.js** and **NestJS**, implementing RESTful APIs with WebSocket connections for real-time threat monitoring and live data streaming.
- **Database Design & Integration**: Designed and optimized database schemas in **MySQL** and **MongoDB**, successfully migrating the application from dummy/test data to live database connections, ensuring 100% accurate real-time information display across all UI components.
- **Email Automation**: Developed comprehensive email notification systems using **Nodemailer** with custom HTML templates, handling user verification, password resets, security alerts, and automated transactional emails.

- **Testing & Quality Assurance**: Established robust testing frameworks using **Jest** and **Supertest**, writing unit tests, integration tests, and API endpoint validation achieving 85%+ code coverage and ensuring system reliability.
- **UI Integration & Optimization**: Enhanced user experience by implementing loading skeletons, spinners, and conditional rendering during data fetch operations, eliminating dummy data placeholders and ensuring smooth transitions between loading and content states.
- **API Development**: Created RESTful endpoints from scratch with proper error handling, input validation, middleware implementation for authentication, logging, and request/response formatting.
- **Performance Optimization**: Optimized database queries, implemented indexing strategies, and added pagination/filtering, reducing API response times by 40% and improving overall system throughput.
- **Security Implementation**: Integrated JWT authentication, rate limiting, input sanitization, and security best practices to protect against common vulnerabilities.
- **Code Quality**: Participated in code reviews, followed clean code principles, and maintained comprehensive API documentation using Swagger/OpenAPI.

Pixel Academy | STEM Instructor |Nakuru/Kenya **Sept 2025 - Present**

I Teach students STEM Subjects. i.e

- (IOT) Internet of things.
- Web development.
- Robotics.

Kabarak University | IT Support |Nakuru/Kenya **May 2025 – Aug 2025**

- Performed networking duties.
- Performed maintenance of network devices.
- Assisted in repair and maintenance of computer hardware and software. • Trunking.
- Cable Layering.
- Setting up network cabinets.
- Cable tracing and identification. • Repairing computers.
- cable replacements. • Termination.
- Computer optimization.
- software updates and installation of packages.

Lumia Digital | Clerical Assistant |Kisumu/Kenya **May 2021 – Aug 2025**

- Performed data entry and all cyber services .
- Assisted customers with basic computer operations .
- Maintained order and document organization.

PROJECTS

Aquila LMS (Learning Management System)
Backend Developer | Oct 2025 – Present

Aquila Cyber needed a scalable LMS backend for online course delivery and user management. Build the entire backend from scratch with security, automation, and easy frontend integration.

- Built backend with **NestJS** and **TypeScript** using modular architecture.
- Added **JWT authentication** with role-based access control for students, instructors, and admins.

- Created **Nodemailer** email system for verifications, resets, and notifications.
- Designed **MySQL** database schemas for users, courses, enrollments, and submissions.
- Developed **RESTful APIs** for all LMS features including file uploads.
- Wrote tests with **Jest/Supertest** (85%+ coverage) and documented APIs with **Swagger**.

Delivered a secure, scalable LMS backend that automated user management and course delivery, enabling seamless frontend integration and reducing manual administrative tasks.

Alutra Website
Backend Developer | 23rd Dec 2025 – 10th Jan 2026

Altura needed a dynamic website with automated notifications for job listings, contact forms, and partnership inquiries.
Build a complete backend from scratch to replace static content with dynamic data and automated team alerts.

- Built backend with **Express.js** and **TypeScript** using MVC pattern and RESTful APIs.
- Designed **MySQL** database schemas for job listings, contact forms, and partnership inquiries.
- Created **Nodemailer** email system with HTML templates to alert the team on form submissions.
- Developed dynamic **job listing APIs** serving real-time data from the database, plus admin endpoints for easy management.
- Added partnership form processing that stores inquiries and emails the business team.
- Secured endpoints with input validation, rate limiting, and CORS.
  Used **Jest/Supertest** for integration testing.

Delivered a dynamic backend that automated team notifications, eliminated manual updates, and improved response time to client inquiries.

Aquila cyber website
Backend Developer | Jan 2026 – 20th Jan 2026

Aquila Cyber needed a dynamic website with real-time course listings and automated notifications for contact forms and partnership inquiries.
Build a complete backend from scratch to replace static content with dynamic data and secure admin controls.

- Built backend with **Express.js** and **JavaScript** using MVC architecture and RESTful APIs.
- Designed **MongoDB** database schemas for courses, contact forms, and partnership inquiries.
- Developed dynamic **course management APIs** serving real-time data, plus **JWT-protected** admin endpoints for easy updates.
- Created **Nodemailer** email system with HTML templates to alert the team on form submissions.
- Added partnership form processing that stores inquiries and emails the sales team.
- Secured endpoints with JWT, rate limiting, and input validation. Used **Jest/Supertest** for integration testing.

Delivered a dynamic backend with secure admin controls and automated team notifications, eliminating manual updates and improving response time to client inquiries.

Corporate Munch
FullStack Developer | Dec 2025 – Present

Corporate offices needed a convenient food delivery platform tailored for business environments where multiple employees could order from different restaurants.
Build a complete full-stack food delivery platform from scratch similar to Glovo but for corporate use.

- Built platform using **Next.js**, **NestJS**, **TypeScript**, and **MongoDB**.
- Added **live location feature** for real-time delivery address selection and saving.
- Created **restaurant listings** with menus for browsing and selecting food items.
- Developed **shopping cart system** allowing items from multiple restaurants with quantity adjustments.
- Implemented **checkout and delivery tracking** with fee calculation and status updates.
- Designed **MongoDB schemas** for users, restaurants, orders, carts, and locations with proper indexing.

Delivered a seamless food delivery platform that improved corporate ordering efficiency, provided real-time tracking, and offered a smooth user experience across devices.

Eldoret Badminton Club Website
FullStack Developer | February 2026 – present

Eldoret Badminton Club needed a modern website to manage club information, events, and member communications more efficiently.
Build a complete full-stack website from scratch to serve as the central hub for club activities and member engagement.

- Built website using **Next.js**, **Nest.js**, **TypeScript**, and **MongoDB**.
- Developed **Nodemailer** email system for announcements, event reminders, and member updates.
- Created **event management features** for posting tournaments and training sessions with member registration.
- Designed **MongoDB schemas** for members, events, announcements, and club information.
- Built an **admin dashboard** for easy content updates, event management, and broadcast emails.
- Implemented **responsive UI** with **Tailwind CSS** for seamless experience on all devices.

Delivered a modern club website that automated member communications, simplified event management, increased participation through online registration, and provided a professional mobile-friendly online presence.

Book Store App
FullStack Developer | Jun 2025 – sept 2025

Book lovers needed a convenient mobile solution to browse and purchase books on the go.
Build a complete cross-platform mobile app with a robust backend for iOS and Android users.

- Built mobile app using **React Native** and **Expo** for iOS and Android platforms.
- Created **backend API** with **Express.js** and **TypeScript** for books, users, and orders.
- Implemented **JWT authentication** for secure login, registration, favorites, and order history.
- Developed **book browsing** with categories, search, and detailed book information.
- Built **shopping cart and checkout** system for seamless book purchases.

- Designed **MongoDB/MySQL schemas** for books, users, orders, and reviews with proper indexing.

Delivered a seamless mobile bookstore experience that increased book accessibility, streamlined purchasing, and provided personalized user features across both iOS and Android devices.

EDUCATION

Bachelor of Business Management and IT (BMIT) | Kabarak University 2021-2025
